

Windows

Chief® Custom Homes feature dual-pane windows with a low-emittance (low-e) coating that helps block sunlight in the UV and infrared spectrum. Even though they're invisible to the eye, infrared rays increase your home's heat load in the winter and cooling load in the summer, while UV light can fade and degrade your fabrics and furnishings. The low-e film combined with argon gas sandwiched between two layers of glazing produces the most energy-efficient windows available today. Window choices include single-hung, double-hung and casement windows in a variety of colors and finishes.

WINDOWS & TRIM

Interior Trim

All of our trim is real ash, oak and pine wood (not paper wrapped), giving your home a beautiful hardwood appearance that will last for the life of your home.
